
Cloud Expo Europe 26th & 27th February, 2014 London Stand 520

Prologue Cloud Services – Brokering and Cloud Management, Application Marketplace, Desktop as a Service.

After more than four years of investment in various advanced R&D projects (Mobithin, CompatibleOne and CloudPort), funded by the French Government (*Plan Investissement d’Avenir*) and European Union, Prologue is launching, at Cloud Expo Europe 2014, innovative Cloud services providing : Brokerage and Cloud Management, Applications Marketplace and Desktop-as-a-Service.

Today, enterprises are facing the challenge of selecting a specific Cloud that meet their requirements (technical, operational, regulatory), and moreover, be able to run their applications on multiple Clouds, leveraging each Cloud specific features (high performance computing, content delivery,...) Prologue *Use it Cloud Broker* (UiC-B) helps enterprises in achieving this customized deployment on multiple Clouds (Public, Private, or a Mix).

This deployment follows a well defined life cycle: from expressing the needs in a *Manifest*, which will be parsed and transformed into a *Provisioning* plan, then contracting with the appropriate Clouds, and deploying the Workloads over their corresponding infrastructure. Presently, the following cloud providers are connected to UiC-B: Amazon AWS, Microsoft Windows Azure, and Open Stack Clouds (such as CloudWatt in France). Through our partner Computenext, we are able to reach multiple clouds (35) such as SoftLayer and HP Cloud....

On top of UiC-B, Prologue is announcing a marketplace platform called *Use it Cloud Marketplace*, UiC-M, that allows enterprises and software vendors to port their applications to the Cloud and operate them as SaaS. Buyers can subscribe and use the SaaS of their choice and pay this usage according to commercial terms defined in UiC-M. A Desktop-as-a-Service is also associated, which facilitates access of a variety of terminals (desktop, mobile) to the applications.

“We are proud to announce these innovative platforms based on Open Source, which increase the adoption of Cloud solutions by creating interoperability path between heterogeneous clouds, while guiding the enterprise to the right choice in terms of Cloud infrastructure, and facilitating the port of its legacy applications” – Announced Najah Naffah, CEO Prologue

“I am happy to see the positive results of publicly funded research projects, in the form of competitive solutions that meet the needs of private and public sectors in their cloud adoption plan, with a focus on standards, interoperability and reversibility” Announced Georges Seban – Chairman of Prologue Group.

About Prologue

Prologue Group delivers solutions in three key areas that are fundamental to an optimized IT solution servicing the private enterprise or public sector organizations:

- **Cloud Computing** with a brokerage platform for tailoring Cloud solutions to the needs of each business and tools for porting and managing applications in the Cloud with optimized, controlled, and cost-effective deployment.
- **Unified communication** including telephony and fax over IP systems that are fully integrated within the enterprise information system.
- **Enterprise Content Management (ECM) and Exchange (EDI) solutions** of all business documents: incoming and outgoing flows of documents, internal documents (including all formats and types of media, both paper and electronic), whether intended for customers, suppliers, administrations, partners, or employees. Prologue delivers solutions to manage multiple flows of documents related to critical processes in the enterprise.

The know-how of the group is concentrated in three entities: **Prologue s.a., Alhambra Eidos, and Imecom Inc.**, which together offer a perfect combination of skills and services to deliver optimal technological solutions.
